PRODUCTION AND NATURAL RESOURCES.

I.—APPROXIMATE ACREAGES UNDER THE VARIOUS CROPS.

The figures given in this table except those for rubber are estimates based on the results of the Censuses of Production, 1921 and 1924. The acreages are subject to considerable error, and cannot in any way be guaranteed accurate owing to the difficulty in obtaining exact information of the variable areas under village plantation. The coconut area seems to be under estimated and is generally thought to be over 1,000,000 acres. The figures given for rubber are those obtained at a Census taken by the Rubber Controller in July, 1928. They perhaps err somewhat in excess. Figures of gross produce are not given, as in the past, as they are not sufficiently accurate. The export figures of various products are given in pages P 67-116 of this volume.

V.—MANUFACTURES, MINES, AND FISHERIES FOR 1928.

N.B.—There are few regular manufactories, mills, &c., in Ceylon, those entered in this return being, with the exception of the steam engines and a few of the oil mills, of a very simple kind. There is also no regular yard for shipbuilding in the Island; small sloops and schooners are, however, frequently built and launched locally.

LABOUR, WAGES, AND COST OF FOODSTUFFS, &c.

I.—LABOUR.

Classification.—Manual labour in Ceylon may be best considered under the following heads :—

(1) Unskilled—

- (a) Immigrant.
- (b) Indigenous.

(2) Skilled.

Skilled and Unskilled Labour.—The dividing line between skilled and unskilled labour is not always clear ; but the former term generally connotes work done with tools by skilled persons, such as artisans technically trained to use them. Unskilled work is also generally done by persons using tools, but of a simpler kind. Most agricultural manual work may be reckoned as unskilled, though such tasks as tea plucking or rubber tapping require considerable skill and experience.

General Legislation.—Ordinance No. 11 of 1865 applies to all contracts for hire and service, and section 3 setting out the standard contract in Ceylon reads :—

“ Every verbal contract for the hire of any servant, except for work usually performed by the day, or by the job, or by the journey, shall (unless otherwise expressly stipulated, and notwithstanding that the wages under such contract shall be payable at a daily rate) be deemed and taken in law to be a contract for hire and service for the period of one month, and to be renewable from month to month, and shall be deemed and taken in law to be so renewed, unless one month's previous notice or warning be given by either party to the other of his intention to determine the same at the expiry of a month from the day of giving such notice.”

Contracts for hire and service must be in writing and signed before a Magistrate or Justice of the Peace, if the period for which they are made exceeds one month.

Section 27 dealing with sickness of employees reads :—

“ Any servant who shall be incapacitated by sickness from labour whilst in the service of any employer shall be entitled to lodging, food, as well as medical care, at the expense of such employer during such incapacity ; provided that the employer shall not be bound to pay to the servant during such period his wages in addition ; provided further, that nothing herein contained shall prevent the employer from determining the contract under the 10th section of this Ordinance in case the servant shall become permanently disabled from completing his contract.”

In practice labourers who are ill receive free medical treatment at the Government hospitals and dispensaries with which Ceylon is liberally supplied.

There is no system in force resembling the National Health Insurance Schemes of other countries based generally on subscriptions from the State, employers, and workers.

There is no Ordinance dealing with the right of association or insurance against accidents, unemployment, old age, or old age pensions.

Washington Conventions.—Ordinance No. 6 of 1923 legalizes in Ceylon the Washington Conventions regarding the employment of women, young persons, and children in industrial undertakings. No Indian child under ten years of age can be lawfully employed to work on estates.

Unskilled Labour.—Unskilled labour in Ceylon may, for the sake of convenience, be considered under the heads estate and non-estate, each of which may be divided into immigrant and indigenous.

ESTATE LABOUR.

The immigration of labour from India to the estates in Ceylon is a movement of long standing, dating back to 1830 or earlier. The total resident estate population of Indian labourers is estimated to be about 739,000 (end of 1928).

Hours of Work.—Indian labourers on estates must be paid overtime if they work more than eight hours a day as they are allowed one hour for a midday meal in the working day of nine hours as defined by law.

Wages.—The general average minimum wages, cash bonuses included, for the most unskilled time workers on the estates vary from 50 to 55 cents a day for men, 30 to 35 cents for women, and 20 to 35 cents for children. Some men earn up to 65 cents and women up to 50 cents a day at time work. More than half the work on estates is done on a piece work basis, and thereby many labourers are enabled to earn twice or three times the amounts earned at time work. A male rubber tapper on a good estate can easily earn a rupee for half a day's work, while a girl plucking tea leaf can earn a rupee for a day's work during the harvesting seasons.

In addition to nominal or cash wages, labourers on estates receive bonuses as well as indirect wages, such as free housing, free medical aid, free firewood, free maternity benefit, and rice at about 14 per cent. below the market rate. On some estates they also have the free use of garden plots and get a free issue of cloths, and sometimes presents at festivals.

Legal Minimum Wage.—It is proposed to introduce legally binding minimum rates of wages to protect the least skilled able-bodied workers from payment of wages below the average rates for such labourers and in a minority of cases below a fair wage. The rates proposed for time workers are :—

			Men. Cents.		Women. Cents.		Children. Cents.
Low-country	..	..	50	..	40	..	30
Mid-country	..	..	52	..	41	..	31
Up-country	..	..	54	..	43	..	32

together with issue of good unblended rice at Rs. 6·40 a bushel and a free issue of rice to widows with dependents and for non-working children. Boys above 16 or girls above 15 are reckoned as men and women respectively.

Housing.—Estates can be legally compelled to erect sanitary lines or living rooms made of permanent materials and properly drained, lighted, and ventilated, and Inspecting Medical Officers administer estate housing law. The result is that from 1922 to the end of 1927 about 135,000 rooms up to the Government standard were built on estates at cost of about Rs. 49,000,000. This revolution in the housing of estate labour is one of the most satisfactory achievements that the Ceylon planters have accomplished in recent times. The average number of residents per room on estate lines is now 3·8 and there is little overcrowding.

There are also about 55,000 latrines on estates employing Indians and a pipe-borne water supply for about 117,000 rooms.

Medical Aid.—In the case of Indian estate labour Ordinances No. 9 and No. 10 of 1912 impose on planters the legal duty of providing medical aid for such labour and free maternity benefit. Employers of Indian labourers on tea, rubber, and cacao estates alone pay for the medical wants of their labour and these estates have contributed large sums on account of the medical aid of Indian labourers.

Department of Indian Immigrant Labour.—The Department of Indian Immigrant Labour controls the recruitment of Indian labourers, and administers "The Immigration Fund," from which are met various expenses in respect of the recruitment, repatriation of labourers, and other matters. The Administration Report of the Controller may be referred to for fuller details with regard to immigrant labour.

INDIGENOUS LABOUR ON ESTATES.

The indigenous estate labour, in general, differs chiefly from the immigrant labour in that it is not resident. The Sinhalese who form most of the indigenous labourers on the estates are usually drawn from the surrounding villages, and are consequently less amenable to estate discipline. Having other interests and possibly other means of livelihood, they are for the most part less regular in attendance than the Indian Tamils. But excellent results can be obtained with indigenous labourers, particularly if they are housed on the estates. The numbers of indigenous labourers employed on estates are increasing, but they do not at present amount to more than 14 per cent. of the total labour force.

NON-ESTATE LABOUR.

Non-estate labour is of many different kinds; considerable numbers of immigrant labourers, mainly unskilled, are employed by Government Departments, such as the Public Works, Railway, Harbour Works, and others, by local bodies, by private firms, &c.

The general conditions in Government service are governed by provisions decided upon on the advice of the Labour Advisory Committee. This Board also on occasion informally fixes rates of pay per hour in workshops, and its ruling is generally acted upon.

Two schedules of the classification of daily and hourly paid labour drawn by the Labour Advisory Committee and sanctioned by Government in 1926 are given below :—

Many indigenous labourers are similarly employed. In addition they supply a large proportion of the skilled labour, such as carpenters, blacksmiths, masons, &c. Their rates of pay differ according to age and skill from 60 cents to Rs. 8·10 a day. They are also employed in plumbago mines, cleaning sheds, mills of various kinds, the manufacture of copra, coir, &c. But the greatest numbers according to the Census of 1921 were cultivators of paddy amounting to about 417,000 persons. Most of them cultivate their own lands or help in the cultivation of others lands on varying terms. Others earn from 15 cents to Rs. 2 a day according to age and sex. Many of these occupations are unorganized, and no general statement can be made about their hours and conditions of work.

The conditions of non-estate labour are in certain cases unsatisfactory in respect of wages paid, housing provided or available, &c. Attention is being given to these matters, but the difficulties experienced elsewhere are being met with.

* Wages for all districts are not given as the figures are not of great value.

† In some parts of this district for village labour, men receive no payment if morning and midday meals are given, and women work a day for a kuruni of grain of any kind. In Wellawaya division in addition to cash wages, kurakkan and paddy are given to agricultural labourers.

‡ Wages are often paid in kind at the rate of 1 marakkal of paddy in place of 50 or 60 cents. 1 marakkal of paddy is equivalent to 7 heaped measures or 8 cut measures (seers).

§ Also paid by the job.

|| Also paid by the job at rates varying according to the kind of timber and hardness of wood. In the case of jak they are Rs. 8 per 100 sq. ft., and Rs. 12 per 100 cubits.

METEOROLOGY.

General Remarks.—There is a marked variation in climate between the different parts of Ceylon. In the low-country, with a mean temperature of the order of 80° F., a noticeable feature is the small range of both temperature and pressure. There is, however, wide divergence between the moist conditions in the south-west of the Island, where the average annual rainfall varies from 100 to over 200 inches, and the dry zone areas of the north, north-west, and south-east.

Inland, with altitudes up to over 8,000 feet, a cooler climate is experienced, with a corresponding change in vegetation and an increased range of temperature.

Rainfall.—The highest total was 246·3 inches at Kenilworth. Carney came next with 236·8, and still holds the highest average (233·6) among stations with over ten years' figures. Others with over 225 in 1928 were Ingoya and Maliboda.

The lowest figures were 25·80 at Puvarasankulam and 27·88 at Yala. Marichchukkaddi still holds the lowest average (34·61) from which its total for this year differed by less than a tenth of an inch. Other gauges with averages of less than 40 are the three on Mannar Island, and Ponparippu.

The chief features of this year's rainfall were freedom from cyclonic activity (except for an interesting exception in July), a weak south-west monsoon, and well developed intermonsoon local thunderstorms. The last named made the distribution of rain rather uneven, and difficult to summarize briefly. The average was passed at most stations in the Kelani Valley, the North-Western Province, the Jaffna Peninsula, and along the north-east coast, and at about half those in the remaining low-country areas. Deficits predominated in the North-Central Province, in the up-country areas, and immediately south of the main hills. The most marked deficits were in the Rangala and Horton Plains districts.

Temperature.—The temperature in 1928 was on the whole slightly above average. The offsets in table II. are comparable between one station and another, although some observations were made in sheds and others in screens, as in the latter cases the old shed averages have been adjusted to equivalent screen averages by means of simultaneous readings in sheds and screens before the former were discontinued.

The station showing the highest mean shade temperature for the year was Mannar, 83·1° F., and the lowest Nuwara Eliya with 59·9° F. The figures for Colombo and Kandy were 80·8° F. and 77·2° F., respectively.

The highest shade temperature in air recorded during the year was 99·3° F., at Anuradhapura on March 26. The highest on record is 103·7° F., at Trincomalee on May 12, 1890. The lowest this year was 31·2, at Nuwara Eliya (6,000 feet above sea level) on February 20, at which station 27·1° F. was recorded in 1914. The highest shade temperature in Colombo in 1928 was 92·0° F. on March 10, and the lowest 65·9° F. on February 27.

The mean daily range, *i.e.*, the difference between the mean of the maximum and the mean of the minimum, was highest at Badulla, 18·2° F., and lowest at Galle, 7·8° F. At Colombo and Kandy it was 11·0° F. and 15·0° F. respectively. The absolute range for the year, *i.e.*, the difference between the highest and the lowest readings actually recorded at any one station, was greatest at Nuwara Eliya, 46·1° F., and lowest at Galle, 20·4° F.

The standard exposure for thermometers in Ceylon is now a large type of Stevenson Screen mounted with its base 4 feet from the ground. In all cases where these screens have been installed simultaneous readings have been made in them and in the old sheds in order to connect the shed averages with the new screen readings. In the case of Colombo, Puttalam, Mannar, Jaffna, Trincomalee, Badulla, and Diyatalawa screens were in use throughout 1928, and the averages given in this report are equivalent screen averages obtained by applying to the old shed averages the observed differences between shed and screen readings during a period of not less than a year. The effect of these corrections on the mean has been to reduce them, the reduction being less than 1° F. in all cases except Trincomalee, at which station the shed was in a particularly open site and so liable to receive more external heat by radiation.

The figures for other stations are shed readings, even though both shed and screen readings may have been taken at them for several months in 1928. The offsets from average are thus fairly comparable throughout the table, since while admitting that the screen reading at a station is usually of the order of half a degree below the shed reading, an excess of say 0.2° F. in a shed reading in 1928 above the shed average at that station would indicate very much the same excess of temperature as an excess of 0.2 in a screen reading in this year above the screen average deduced for the same station.

As in the case of the dry bulbs, the averages of the wet bulbs are corrected to screen equivalents in the case of stations where screens were in use throughout the year (Colombo, Puttalam, Mannar, Jaffna, Trincomalee, Badulla, and Diyatalawa).

Owing to the greater liability to variation in wet-bulb readings the correction applied has not been derived from the individual comparisons at each station, in each month, but a standard correction has been applied throughout, consisting of 0.6 of the mean dry bulb correction for that station. The figure 0.6 was obtained independently at both Colombo and Trincomalee for the ratio of the wet bulb difference to the dry bulb difference.

TABLE II.—Average Monthly Mean Temperature of Stations in Ceylon up to 1928 inclusive, together with the offsets of the corresponding Values recorded in 1928 from these Averages.

* From 17 days' observations.

In the above table the tendency for both extremes to occur at the same time of year is noteworthy, and calls attention to the fact that in the tropics variations in cloudiness have a greater importance relatively to variations in the sun's declination than is the case in the temperate zones.

TABLE IX.—Average Percentage Humidity from the Minimum readings of the dry-and wet-bulb thermometers together with the offsets of the 1928 values from these averages. These minima do not necessarily occur at the same instant and a consequent uncertainty is introduced. The evidence of thermographs shows that this uncertainty is very small, and the publication of this table seems desirable owing to the fact that the humidity at night differs considerably from that by day, and hence table VIII. alone gives a very incomplete statement of conditions as a whole.

TABLE XI.—Offsets of the 9.30 and 15.30 Air Pressure Readings of the Year 1928 from the Average expressed in decimals of an inch of mercury.

Taking one millibar as roughly equal to 0.03 inch of mercury, it will be seen that offsets of as much as a millibar were very rare.

TABLE XIV.—High Velocities of wind at Colombo (Fort). The figures below are in general taken from an anemometer at the Fort, gusts of 25 miles per hour or over being tabulated. Figures in italics are from a similar instrument at the Observatory, and are only given for times when the Fort instrument was out of action. Observatory figures are included if over 20 miles per hour, as velocities at the Observatory are liable to be associated with slightly higher velocities at the Fort. Observatory readings are not given at times when Fort readings are available.

The numerical values below must only be accepted as approximations, roughly comparable among themselves, but not precise. The time given is Ceylon standard time, 5½ hours ahead of Greenwich.

[Cases in which gusts or squalls are accompanied by sharp changes in direction are denoted by a (*).]

TABLE XV.—Maximum amount of rain falling in any periods of 1, 2, 3, 4, &c., consecutive days, during the year 1928, for selected stations. The periods of consecutive days are given between 10 and 20 by steps of 2, between 20 and 32 by steps of 3, between 32 and 40 by steps of 4, and above 40 by steps of 5.

The figure under each number represents the maximum amount of rain falling on that number of consecutive days during the year, the different figures for each station not necessarily referring to the same wet spell. For example, at Watawala, the highest fall in any 5 consecutive days is 13.50 inches, in May, the highest fall in any 6 consecutive days is 16.68 inches, in October.

The series is terminated for each station when the intensity of the rain finally falls below 2 inches per day. In the case of wet spells commencing in December and lasting into January, the total rainfall in any particular group of consecutive days is considered as belonging to that year in which the greater part of the rain fell. There were no cases of that kind this year.

The rainfall day is not the calendar day, but from the observation of one morning to that of the following morning (even in the case of stations at which pluviograph records are available), and the rainfall year ends with the morning observation of January 1, 1929.

II.—HARBOUR FACILITIES.

Colombo Harbour.

There are no enclosed wet docks. Vessels lie at moorings in the shelter of the breakwaters, and are loaded or discharged from lighters.

There are six berths available during the south-west monsoon and six during the north-east monsoon for vessels drawing up to 33 feet of water; the area being deepened to 36 feet below low water ordinary spring tide, for vessels of 33 feet draught, is being extended. The Port can accommodate 36 vessels in the north-east monsoon, and 40 vessels in the south-west monsoon, excluding accommodation at the Graving Dock Guide Pier and Oil Jetties.

There are three oil jetties and one pier available for shipping as follows :—

Discharge Jetty, where vessels of 500 feet length and 27 feet draught can be berthed.

Outer Bunkering Jetty, where vessels of 500 feet length and 27 feet draught can be berthed.

Inner Bunkering Jetty, for bunkering barges only.

Graving Dock Guide Pier, length 800 feet, at present available for vessels of 27 feet draught, when not required for docking purposes.

In addition to the Graving Dock, there is a Patent Slip capable of taking vessels up to 1,200 tons dead weight. The Port is equipped with a thoroughly up-to-date Oil Installations Depôt, which is directly connected with the Harbour front by pipe lines. Ships bunker either at the Graving Dock Guide Pier and Oil Jetties or in the stream from barges.

Galle Harbour.

There are seven berths accommodating vessels up to 450 feet in length and 27 feet draught.

Ships are moored head and stern with their own bower anchors and stern moorings supplied by the Harbour authorities.

Cargo is landed by means of lighters at three piers, which have depths of up to 6 feet alongside.

The anchorage is exposed, particularly during the south-west monsoon.

Pilotage is compulsory.

Ships are taken out, but not brought in during the night.

Trincomalee Harbour.

The maximum depth of water available at the Customhouse Jetty ordinary low spring tide is 6 feet 4 inches and of China Bay is 10 feet.

The length of the Customhouse Jetty is 300 feet and that of China Bay is 397 feet.
